

Homeopathy

Homeopathic Medicines & Hiv/aids

Dr. Narinder S. Thethy (Homeopath)

AIDS is a complex disease caused by a virus known as HTLV-III (human T-cell lymphotropic virus type -III). HTLV-III is one of a family of retroviruses associated with human diseases. HTLV-III attacks certain cells in the human immune system, leaving patients vulnerable to "opportunistic" infections. AIDS causes a decrease in the total number of lymphocytes (immunity cells).

We know AIDS is a heinous killer. But few know that there is an entire system of alternative medicine that has been proven effective in epidemics and regular practice when orthodox medicine has failed. The alternate system, "HOMEOPATHY" has medicines to deal with HIV and AIDS, especially when coupled with sound dietary and other natural hygienic programs.

The tiny viruses (HIV/AIDS) are thought to number from 15 to over 120 distinct mortal forms. Part of the problems encountered in treating AIDS is that it is a viral infection. For example Colds (flu) are thought to spring from over 100 different viruses, so finding an "anti-viral" remedy that will treat all of them (viruses) has been a challenge to orthodox medicine. This is because "allopathy" (conventional medicine) approaches diseases and their treatment by analyzing the etiology (external cause) and pathogenesis (path and progress) of sickness. Herpes is a second example, caused by 5 viruses, which in some ways is similar to retroviruses. On the other hand, Homeopathy has cure for common colds and herpes that you may never have heard of.

The HIV and AIDS related complex (ARC) is characterized by swelling and disease of lymph nodes; recurring flu symptoms; fatigue and malaise; loss of weight; loss of appetite; fever; night sweats; diarrhea (often due to amebiasis); in some cases an abnormal decrease of red blood

platelets accompanied by hemorrhages into the skin, mucous membranes, or other organs with an unknown cause. And a wide susceptibility to other bacterial, fungal or viral infections such as oral thrush; Herpes Zoster (inflamed blisters along the course of the skin nerves); small skin tumor, and pimples containing puss. The viruses also infect the brain and spinal cord and cause acute meningitis.

An irrecoverable mental deterioration is the most common and devastating neurological complications of AIDS. These patients may also develop spastic paraplegia (paralysis of the legs and lower part of the body), ataxia and diseases of nerves. It can cause *Candida albicans* (yeast infections), Tuberculosis, Pneumonia, and Legionnaire's disease; Eye disease (particularly the retina); cancers like Kaposi's sarcoma, cancer of the tongue, cancer of rectum, Hodgkin's disease etc.

Side effects

The continuous use of strong medicines causes serious side effects. To the conventional doctors a "side-effect" is an undesirable characteristic of the drug. But to the homeopaths, all the drug-actions are important. The primary effects are the "drug-symptoms" (including the side-effects) to be matched to the "patient-symptoms" to be treated with that particular drug. Homeopathic

"homeopathic remedies have been successfully treating virus caused diseases for nearly two centuries"

remedies have demonstrated remarkable efficacy in clinical trials, the principles of healing have remained unchanged. It evokes a sense of reliability and trust.

Homeopathic remedies have been successfully and quickly treating virus caused diseases for nearly two centuries. In homeopathy, the "symptoms" of AIDS and ARC (AIDS Related Complex) patients are extremely important to the homeopathic doctor. For treating AIDS the homeopath must make the remedies "specific" for each patient according to his symptoms and not rely upon the disease name.

Existing Homeopathic remedies work by stimulating the body's own healing power (immune system). These remedies have anti-viral effects without having any side-effects and should be prescribed by a physician who can track the patient's progress. Constitutional remedies are selected based on totality of the symptoms of the patient. Homeopathic remedies are safe and effective and have

demonstrated remarkable efficacy in clinical trials while the principles of healing have remained unchanged for a long time. It evokes a sense of reliability and trust.
